Part (c) Identify and discuss the key factors that the management of AppliCo should consider in evaluating to which African markets (South Africa, Kenya, Zambia) it should sell its iDish product.		
1	Management of AppliCo need to consider both financial and non-financial factors in deciding whether to invest in accessing the greater Africa market, such as:	1
2	Management's risk appetite : relates to balancing the trade-off between risk and return, e.g. does the estimated initial excess profitability in the Zambian warrants taking the additional risks such as poor infrastructure, reliability of delivery, etc	1
3	Profitability for each alternative is critical in the decision-making process.	1
3.1	Zambia is the most profitable per product per unit R4900, Kenya R4100 whereas South Africa R3400 is the least profitable per unit (profit per unit). As production capacity is limited to 9000 units, profit should be maximized if sale preference is given to Zambia 2 000 units, Kenya 6000 and SA 1000	1
3.2	- resulting in a maximum available profit of R37,8million.	1
3.2	Insurance cost for each alternative should be considered in relation to profitability, as these costs are not established by the research team (unknown).: Should insurance and other related cost be marginal for South Africa, and more than R1 500pu for Zambia and R200 for Kenya, South Africa would be the better option. (SA cost marginal vs other countries)	1
4	Logistical (transport) considerations and implications by country, considering the information provided by the research team	1
4.1	 Zambia: The transport options available to deliver to Zambia are limited as it has no access to sea transport or low cost air carrier numbers. The most viable options would be via road and/or rail which are expected to be higher risk and lead to higher insurance costs, operating losses and damaged goods costs 	1
4.2	Kenya:	ı
4.2	Transport to Kenya has a sea transport option, which appears to be relatively better developed than its road and rail networks,	1
	 Sea carriage poses risks of pirates along the East African coastline and could result in high maritime insurance costs. 	1
	 Air transport appears a viable option with a comparatively high number of registered carrier departures. 	1
4.3	 South Africa: Have well-developed road, rail, sea and air network Access and transport related cost such as insurance and other costs are expected to be low and delivery more reliable. 	1
5	Consumer market and sustainability of demand product's affordability and its ability to meet consumer needs in each of the assessed markets (small markets fade quickly & product perception):	1
5.1	South Africa. Consumer market demand in South Africa is more than five times that of the other markets. Consumers have on average more than three times the GDP per capita, access to finance/credit making them more likely to invest in convenience items (consumer spending/income category). This is further supported by the product's focus on energy efficiency and after-sales support,	1
	which should result in a stable ongoing market across the country. This is however offset by strong and active competitive forces in the market, the increased consumer activism and apparent rise in warranty claims. These factors could result in increased compliance, legal and warranty costs.	1 1 1
5.2	Kenya Kenyan customers prefer buying cash rather than credit, aligned to their culture of savings and limited access to formal credit markets. This may indicate a need for a different marketing approach to target cash consumers opposed	1
	to using credit as a lure. The growing middle income bracket aligns with AppliCo's need to find new growth markets and Kenya could open opportunities for other AppliCo products as its brand becomes more recognised.	1

	The consumers' price sensitivity could result in lower than expected sales depending on	
	alternatives and local competitor actions in the market.	1
	Consumer and government desire for sustainable and efficient energy support the iDish which	
	meets these demands and could support the initial product launch.	1
	Kenyans 'appetite for global brands ', works in AppliCo's favour.	1
5.3	Zambia	
	Consumers are comprised largely of persons in the lower income bracket and the product might	1
	appear expensive.	
	The appetite for the product is likely to be subdued with an expected demand of only 2 000 units.	1
	The products status as a leading brand is missed on the Zambian consumer, who demands low-	
	cost, durable products.	1
	The lack of formal credit markets and high interest rates make cash sales critical and at current levels it is hard to see the iDish achieving even its level demand expectation.	1
	levels it is hard to see the iDish achieving even its low demand expectation. The currency volatility could erode any profits made in Zambia due to the depreciation in the	
	currency, resulting in reduced profitability or potentially losses being incurred.	1
6	Energy and water supply as the product requires a stable supply of water and electricity, which is	1
	a scare resource.	
	The risk of unstable supply could damage the iDish, it also affects the usability of the product.	1
6.1	South Africa and Kenya both have extensive water supplies to homes and stable electricity	
	supplies, which means that the consumers would benefit from use of the product.	1
6.2	Zambia's have inconsistent power supply, resulting in consumers having less desire for the	_
7	product as they might not continuously benefit from its use.	1
7.	Market focus: AppliCo is able to deliver 9 000 units to the market. It should consider whether it wants to pursue a single market or a mix of markets	1
7.1	Zambia:	
,.,	Small market, high margins: If it wants to pursue a single market, Zambia, which only has a	1
	potential demand of 2 000 units, may not be best alternative. However, the potential excess profit	
	per product could justify the immediate investment.	1
7.2	Kenya and South Africa:	
	appear to have a strong demand for the product, but demand is offset by lower margins.	1
7	General	
7.1	AppliCo is not known in the Kenyan and Zambian markets, and might have to spend considerable	
	amounts of money on marketing to create awareness of the company and its products.	1
7.2	AppliCo has not traded in the Kenyan and Zambian markets and does not know the markets - it	1
	might get its strategy very wrong if it do not understand its customers' needs.	
7.3	Kenya and Zambia might not have the same electric current as South Africa, which might mean	
	that additional costs need to be incurred for conversion plugs.	1
7.4	R&M is suffering from liquidity issues which begs the question of where AppliCo will get the	
	funding for its growth strategy.	1
7.5	Political environment and business stability in Kenya and Zambia which could affect exports and	1
	demand.	-
7.6	Local laws and regulations affecting imports and sale of foreign goods in Kenya and Zambia	1
	regulations (credit, consumer protection laws).	
7.7	Cost of providing after sale support: will be much higher for Kenya and Zambia than SA.	1
7.8	Border control issues (bribes/costs): will be higher for Zambia, as road freight only option	1
	Available	49
	Communication skills – clarity of expression	1
	Maximum part (c)	15

Part (d) Prepare a memorandum addressed to the Risk Committee of the R&M group setting out the				
	business risks for the group arising from its strategy to operate in greater Africa.			
1	Political risk			

ITC JUNE 2018 SUGGESTED SOLUTION

1.1		
	Operating in a volatile and politically unstable economy holds the risk for the group of the	
	recoverability of investment/profits derived from African countries due to repatriation restrictions.	1
1.2	The long-term sustainability of the business can be compromised as a result of government policy	1
	changes, protectionism and populist politics.	
1.3	Resource dependent economies, such as Zambia and most other African states, are vulnerable to	
	commodity price movements, making market demand less predictable and increasing earnings	1
	volatility.	
1.4	There is an increased exposure to bribery and corruption given that the group is considering	_
	entering new countries where corrupt officials may target new entrants to the market.	1
	Increased legal, and reputational risk resulting from the risk of bribery and the risk of employees	
	succumbing to the pressure to give bribes to achieve profitability and sales targets.	1
2	Forex risk	
2.1	Currency volatility is a constant concern. The group is exposed to foreign currency risk (USD vs	
	ZAR) which could lead to foreign exchange gains and losses distorting performance.	1
3	Forecast/model risk	
3.1	Estimating consumer demand in foreign markets requires significant assumptions and estimations	1
3.1	Due to the limited knowledge of the different consumer needs it is likely that under/over	<u>'</u>
ا ک.ک	estimation could arise, resulting in realised margins differing significantly from the forecasts.	1
4	Regulatory risk	
	-	4
4.1	Cross border regulatory risk such as taxation, VAT, transfer pricing and double taxation	1
	agreement issues.	4
4.0	This could include exchange control issues.	1
4.2	These issues can exercise a material drag on realised margins/payments delayed.	1
_	Non-compliance with laws and regulations could result in fines and penalties (legal risks).	1
5	Control risk	
5.1	There is a business risk that the entity is expanding rapidly beyond SA borders and the internal	1
	controls may not be adequate, resulting in operational failures and ultimately losses being realised.	
6	Skills risk	
	I hard may be a lack of ckille for the integration and daily operations of the new businesses in Africa	
6.1	There may be a lack of skills for the integration and daily operations of the new businesses in Africa,	1
	resulting in slow market penetration, poor customer service and product delivery.	1

ITC JUNE 2018 SUGGESTED SOLUTION

12. 4	AppliCo should consider its competition within each of the markets against other global and local brands (e.g. Samsung, LG, Bosch) and consider its offering and support services relative to its competitors.	1
	A . 11.11.	
	Available	24
	Communication skills – presentation (memo)	1

art	(e) Discuss the alternative courses of action that could be taken by the Board of Directors to address the liquidity issues that the R&M group is facing	
1	Funding sources	Г
1.1	Consider the possibility of a new substantial share issue. The Debt: Equity ratio is very high and issuing shares will restore some balance (rights issue).	
	The question is, however, whether shareholders would be willing to take up shares in a struggling company?	
1.2	Is there any possibility of loans from shareholders (debentures)/guarantees by interested parties?	
1.3	Consider a possible subordination agreement with present shareholders in respect of long-term loans.	
1.4	The company may be able to negotiate overdraft facilities	
1.5	It may be able to convert some long-term loans to equity if a viable recovery plan can be put to the bank.	
	However, the limited security that is available may be an obstacle.	
	Possible discounting / factoring of debtors	Ļ
1.7	Possible compromise with creditors may be attractive given that underlying assets are unlikely to realise values reflected in the draft annual financial statements if the African operations are not a success in the future.	
1.8	Sale and leaseback of any viable assets could be considered.	Ī
1.9	Improve working capital management , to improve cash flow. (collection on debtors, inventory management – produce on demand)	
2	New business	T
2.1	Given market information, the chances in this regard seem slim, but it may be worth exploring the possibility of negotiating with other agencies / joint ventures to gain access to overseas markets.	
3	Contain / reduce costs	
3.1	An analysis of operational areas making losses should be undertaken to consider the possibility of closure or automation. (synergies)	
3.2	Staff could be retrenched to reduce costs over the long term. However, severance payments may reduce the immediate cost saving benefits.	
3.5	The company should consider additional closure costs that may arise and determine how to provide for these.	
3.3	Assets could be sold off (non-core), although this may also be difficult in the present economic climate.	
3.4	Could other cost areas be limited/reduced by for example investigating / preventing frauds/improving infrastructure resource usage?	
3.6	Long term product change : change focus from 'luxury' furniture to easy-to-put-together, inexpensive products (perhaps more viable in SA market?)	
3.7	The company should consider halting the expansion into Africa and rather concentrate on its South African business until liquidity issues have been addressed.	
3.8	Consider selling household appliances on assignment , rather than producing the products (e.g. the iDish).

(ii)	List of substantive audit procedures to address the fair value of Mxolisi's two properties include	d in
	assets held for sale	
1	Request the reports prepared by Prop Guru, and re-perform all calculations in the reports (and	1
	supporting workings) – Clerical Accuracy.	
2	Agree the figures used in Prop Guru's valuation reports to the relevant account balances in the	1
	general ledger, trial balance and annual financial statements.	<u> </u>
3.	Evaluate whether reliance can be placed on management's expert (Prop Guru) through enquiry of	
	Prop Guru, R&M staff, inspection of relevant documents, etc and assess	
	His membership (qualification) of accredited professional bodies	1
	His experience in doing fair value work on these kind of properties	1
	Their independence / objectivity from the R&M group from Mxolisi,	1
2	Obtain an understanding of the process followed by Prop Guru in computing the fair values by:	
	• inspecting the engagement letter setting out the nature, scope and objectives of Guru's work	1
	(scope);	1
	assessing their understanding of the requirements of the accounting reporting frameworks	
	(IAS 40/ IAS 16)	
3	Agree the property details (such as erf numbers and locations) in the property valuation reports to	1
	the title deeds of the properties to ensure the correct properties were valued.	
4	Perform procedures to assess the reasonableness of the expert (Prop Guru) by:	
	Comparing the fair value to other recent disposals of similiar properties in the market.	1
	• Assessing the reasonability of the discounted cash flows and discount rates used in the fair	
	value determination.	1
	Agreeing the discounted cash flows to budgets, contracts/market rates.	1
5	Should there be a significant disagreement between the auditors fair value findings and that of Prop	
	Guru's, obtain permission from management	1
	to appoint an "auditors own expert".	1
6	Request that management include reference in their written management representation letter to the	
	appropriateness of the fair values attributed to these properties in the annual financial statements.	1
